Lesson Plan/Description of the Project:
- We reviewed what the 4 Sustainability Compass words meant.
- Introduce the 17 Sustainable Development Goals.
- Sort the goals to 2 groups - ones they understand and ones they didn't understand.
- The goals they understand sort it further using the Sustainability Compass and discuss and students justify their choices of where they have placed their goals.
- Students should understand that all 4 areas of the compass are inter-connected.

Reflection

Plusses (Things that went well):
The Sustainability Compass helps deepen student's thinking as they think from different points of view not just one. They begin to justify their choices and help them realise the consequences of their actions affect 4 different areas not just one.

Challenges (Things I would change):
The language of some of the 17 sustainable development goals. Maybe simplify them so students can have a better understanding of them.
Suggestions for other practitioners and educators:

- 

Evidence and Resources:

Earth’s resources are used in a variety of ways
